

Weed monitoring template

Property/location	
Period of report	
Weed species	

Management Requirements	Management Actions	Location <small>(a map should be provided additional to this description)</small>	Action taken (outputs) <small>(include date and control technique)</small>	Result of action (outcome) <small>(include date and observation notes)</small>	Are any management changes necessary?	Decision Future action/next step
Eradication of isolated plants and outbreaks	Undertake a comprehensive survey to determine the location and density of weed infestations. Develop detailed weed management maps. Design and implement a strategic annual control program, prioritising weed species and locations for control.					
Active containment of major infestations <small>(This should only be part of a long term eradication program in the Class A/C Zone)</small>	Delineation (geo-referencing) of major containment area. Establish buffer zones. Prevention of seed set within the buffer zones. Determine program for longer term reduction of infestation.					
Prevention /minimisation of further seed production	Suppression of seed production.					
Seed spread prevention	The design and implementation of a seed spread prevention program.
